Screen Colour

With a new heirachy of brand logos we have an updated colour palette.

The core colour is the Navy blue, this colour holds all the brands together under the same roof.

The three core brand colours you can see are supported by tint and shadow colours. To be used where desirable and within reason such as charts, graphs and graphics.

The supporting greys can help add depth to areas that are not necessarily directed one to one of the 4 CLEAR sub brands.

Please allow for plenty of white space when designing with these colours. These colours are very powerful and need some space between to make the colours not merge into one.

Typography

Halcom

Halcom is our main font, it is used for both display and body copy as well as headlines. Bold and medium can be used within reason.

Use Bold for titles only, creating confident large type.

Medium to be used to highlight in copy sections against the Regular weight.

A geometric modern sans serif typeface. 16 weights with 550 characters with an alternative lowercase a, g and y, five variations of numerals, manually edited kerning and Opentype features.

Adobe font

Icons

Playful and duetone are the main theme for the icons. Stick with a hand drawn motive and used a tint grey to create the depth of the icon. Have a good judgement of how complex the icons can be. For instance no headlights on the car to a simplified pie chart.

Photography

Photography should be in a reportage style, showing candid people in everyday scenes. Subjects shouldn't look directly to camera and facial expressions must always look engaged and 'in the moment'. Aim for natural, well-balanced light where possible, bright imagery over dark/gloomy. Avoid images that look too obviously stock library in style.

Photography grading

Before use, all images should be professionally graded. The target is a bright, natural palette, preserving warmth in the skintones. Nothing too stylised and heavy with colours or contrast, we want to keep them as natural as possible, as we are showing candid moments.

Before

Green in shadows

Washed out with minimal contrast

Very green overall

After

Removed the green hues in the shadow

Added a natural warmth (red/yellow) to help with the skin tone

Subtle increase in contrast to maintain depth but ensuring that the shadows don't become too heavy

Photography grading

Before

High contrast/losing detail in shadows

Unnatural skintone

Oversaturated

Very red overall

After

Toned down the red overall

Desaturating the image gives it a more realistic aesthetic

Maintaining contrast but not letting it affect the colours

Taking the deep red out of the skin tones creating a more natural and soft look

Brand elements

Using the 3 core elements we can be very playful to create a unique CLEAR brand look and feel. Allow these shapes to create depth. They don't always have to be overlapped with imagery but it does help.

Feel free to use the brand colours on these shapes and the next page will show how these work on creative applications.

[About](#)[Contact](#)[Donate now](#)

We help people get vital information, and be heard, no matter what languages they speak.

We're **CLEAR Global**. We bridge language gaps for humanitarian aid, crisis response, global development and local action. You may know us by our most famous division, Translators Without Borders.

Get in touch

What we do

We help language-marginalized people get the information and resources they need—and the voice they're due

We do it using language technology, innovative language service platforms, an experienced, professional staff, and a community of 60,000 linguists in 148 countries.

Our work helps some of the world's leading aid organizations language-enable their community engagement efforts, so they can reach more people, listen harder and accelerate impact.

Introduction

Bridging the language barrier

The world can be roughly divided into two big groups: the 3.5 billion people who speak a 'major' language—like English, French, Spanish or Chinese—and the 4 billion who don't.

These 4 billion get *dramatically* less of the two things that give people agency over their own lives:

- Access to life-critical information that can save lives in crisis times and improve the quality of life every day.
- A voice to express their own needs. To be heard. To be taken into account.

Speakers of the most-spoken languages take both of these things for granted.

But these basic human freedoms are denied to the 4 billion people who speak Dinka or Nuer or Tamil or Levantine Arabic—or people who speak Vietnamese but live in California.

The Capacity Campaign

Making an impact

“The ability of Wikipedia to provide free, accurate, and accessible health care content to people in their native languages is possible in large part because of TWB.”

Lucas Rosnau,
Translation Coordinator,
WikiProject Med Foundation

“TWB has established itself as a technical agency that needs to be at the table when shaping the short and medium term implementation plans to increase refugee educational opportunities.”

Phedra Moon,
Head of Aid,
High Commission of Canada,
Dhaka

“Accountability to the people we assist passes through language.”

Daniella Durso,
Country representative,
ECHO in Bangladesh

Introduction

We need \$10m to grow faster and meet urgent demand

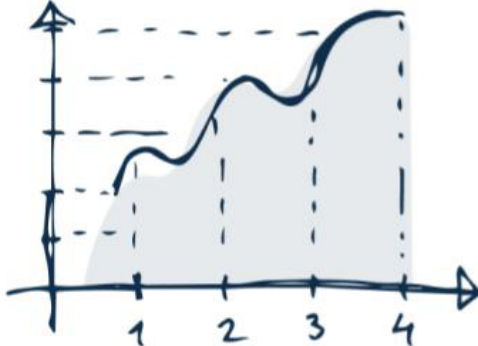

The humanitarian world is discovering the power of localized community engagement. They know how Clear Global can accelerate and multiply their impact and reach many more people.

This, plus a combination of global crises, means that demand for our services is skyrocketing.

Today, we're overwhelmed with opportunities to bring our unique expertise and technologies to some of the world's most urgent challenges.

We know we *could* help but we don't have enough resources.

That's why we need to invest now.
